

Peter Maguire

Senior Consultant

Profile

Peter is a highly capable Senior Project Manager with experience delivering project outcomes across a range of enterprise environments for over 15 years. He is skilled in operating with different project management methodologies and accurately applying risk and issues management, status and budgetary reporting plus resources scheduling throughout the project lifecycle. Peter adopts a flexible and adaptive approach to the projects he is engaged on, with emphasis on delivering the required project outcomes and meeting expectations.

Peter uses a highly collaborative approach with strengths in ensuring that all involved parties, both internal and external, agree and support the requirements of the project plan and deliverables. Peter is often praised for his effective communication with all stakeholders and his ability to provide clarity on technical aspects of a project that can be easily understood by non-technical stakeholders.

Consultant Profile

Selected Project Experience

Leading Australian Logistics Organisation

Lead a team to install new IBM Power 10 Infrastructure and migrate the SAP System to the new Infrastructure to a new single Storage Platform.

Responsibilities of this role included:

- End to End project management including, scheduling, Risk and Issue management, resource management and reporting
- Built Business Case to combine 2 Projects into a single delivery project.
- Defined and procured new Frames and Storage Platform to meet business needs in the now and in the future.
- Planned and managed migration of SAP Services (Test, DEV and Production) to the new IBM Power Frames and Storage.
- Planed and managed migration of other systems using the old storage Platforms to new Storage (Windows VM, Oracle, Linux)
- Managed stakeholder reporting from team through to Project Board
- Managed Project-related Risks, Issues, Schedule, internal resources and External Third-Party Vendors

Leading Australian Logistics Organisation

Lead a team running an RFP for a Workload Placement Assessment across the business. Responsibilities of this role included:

- Defined and built the RFP proposal with the client Vendor Manager to ensure the request met the needs of the project.
- Worked at length to clearly identify the applications that were in-scope and out of scope of the project, ensuring attention was given to applications that already had a roadmap or had a known termination date.
- Developed a 'score card criteria' to assess each vendor submission.
- Managed multiple reviewers and assessments to provide a summary and select a vendor.
- Managed vendors and updated on selection process, reviews and additional meetings held with short-listed vendors.

Leading Australian Logistics Organisation

Due to a major upgrade / change to the ATO VPN Solution, the customer were required to implement an VPN Solution to meet the new Australian Tax Office VPN solution.

- End to End project management including, scheduling, Risk and Issue management, resource management and reporting
- Manage internal resource and Third-Party vendor to install new VPN hardware and configure connection.
- Co-ordinated network changes on the Australia Post and Australian Tax Office network.
- Conducted testing of the new solution to ensure functionality and stability
