# Consultant Profile

## Selected Project Experience

### Australian Logistics Organisation – TDM Specialist

- Designed and lead implementation of cloud-native data masking solution in GCP, that can easily be leveraged from multiple source systems at scale and speed with end-to-end automation
- Migration of data integration & transformation processes from IBM Netezza hosted in local data centre to AWS Redshift cloud solution
- Designed and lead implementation of data transformation hub based on Publisher/Subscriber principle. This hub automated data exchange between disparate systems, whilst providing necessary transformations to allow seamless consumption of data in target systems.
- Implemented process of an enterprise-wide data hub platform which consolidated data from several Cloud applications into a single consistent data integration platform

### Advertising Services Organisation – Senior Developer

- Development of high-quality technical solutions ensuring that the development process followed company best practices, methodologies (both agile and waterfall) and standards
- Collaboration with the business stakeholders, business analysts, architects, project managers, vendors, developers and testers
- Producing technical design documentation, providing time estimates for programming tasks and implementation plans and schedules
- Development of such solutions as database-centric application, data marts for reporting and BI, and data integration and interfaces with internal and external (including cloud) systems and applications
- Maintenance and support of existing data transformation and integration processes

### Leading US IT Services & Consultancy – Senior Developer

- Designed and implemented data transformation hub
- Development of standards for the data transformation hub
- Designed and developed data transformation procedures and job control for data delivered via WebSphere MQ Series in varied formats including SAP, IDOC, XML, fixed width and delimited
- Supported UAT and implementation planning
- Liaise with Business Analyst to collate documentation of the client's requirements
- Prepare technical design documents from functional specifications
- Prepare and package product releases
- Coordinate a team of 3 developers
- Mentoring and coaching of junior team members
